Dental Implants Turkey Cost: What the Price Includes

In short

Dental implants Turkey cost, explained: what an implant price covers, what is charged separately, how many trips you need, the brands and the warranty.

November 26, 2026 5 min read

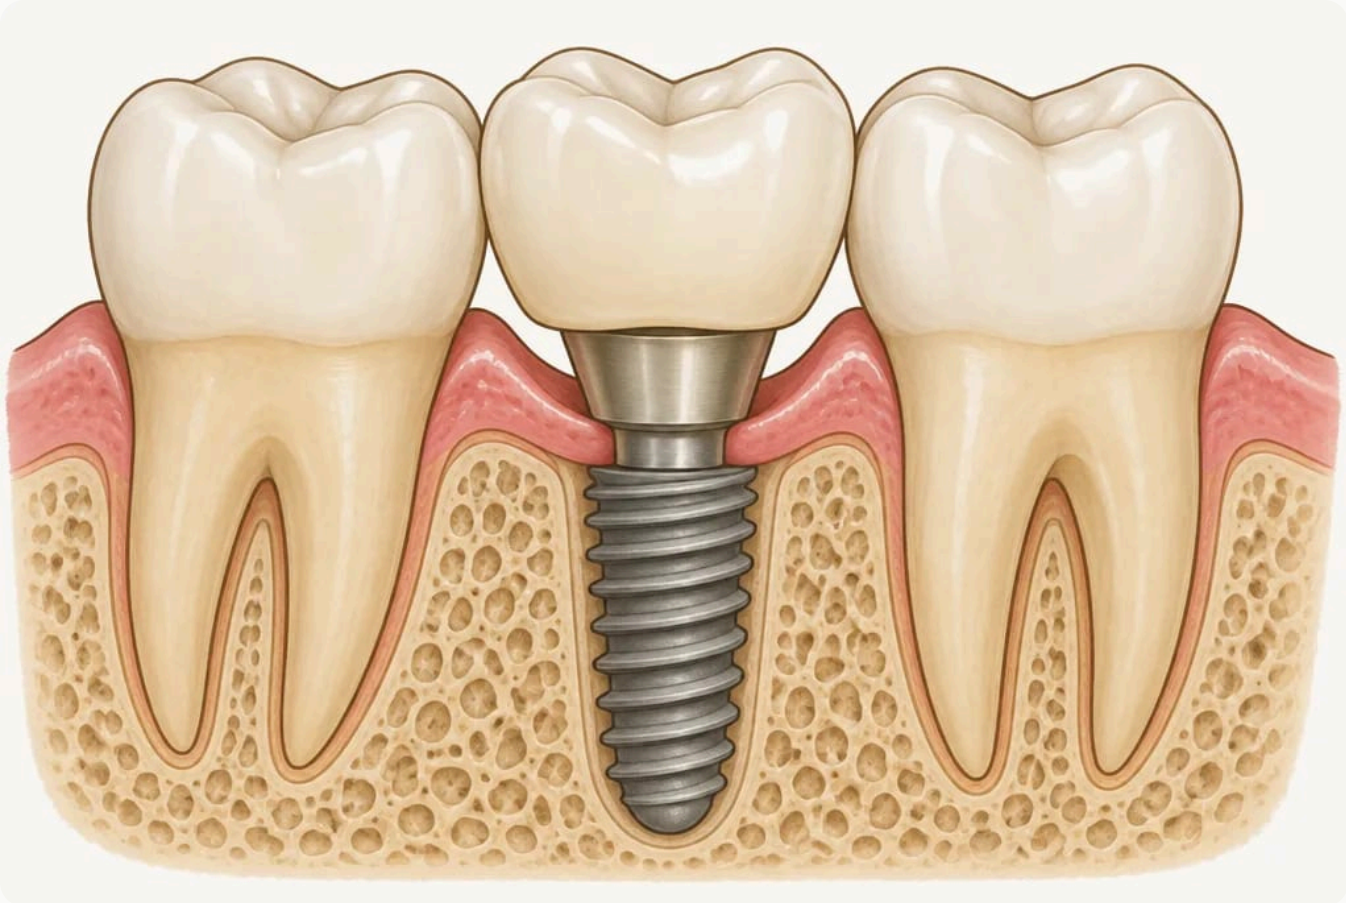

People who search for dental implants Turkey cost usually want one number, and a number is only useful once you know what it pays for. At BM Turkiye Dental Clinic, the price of a single implant covers placing the implant, the consultation, X-rays and a 3D scan, aftercare, coordination and translation. Medication is not included. A bone graft, a sinus lift or a temporary crown is charged separately, and only if your case needs one.

Below is what is included, what is extra, how the trips work and what the warranty covers, so you can compare quotes line for line. Current price ranges are on our prices page.

What a single implant price includes

Item	Single implant price
Implant placement, per tooth	Included
Consultation	Included
X-rays and 3D scan	Included
Aftercare	Included
Coordination and translation	Included
Medication	Not included
Bone graft, sinus lift, temporary crown	Charged separately, only if clinically needed
Hotel and transfers	Optional for a single implant

The 3D scan decides more of the final bill than any other line. It shows the doctor whether you have enough bone for the implant, and so whether a graft has to be added. At BM Turkiye, implant surgery is overseen by Dr Mehmet Dağhan, who also oversees the bone grafts and sinus lifts that prepare the jaw.

What is charged separately

Three items sit outside the implant price, and they are added only when your scan shows you need them:

- a bone graft, when the jaw is too thin or too low to hold the implant;
- a sinus lift, when the bone under the sinus in the upper back jaw is too thin;
- a temporary crown, if your plan includes one.

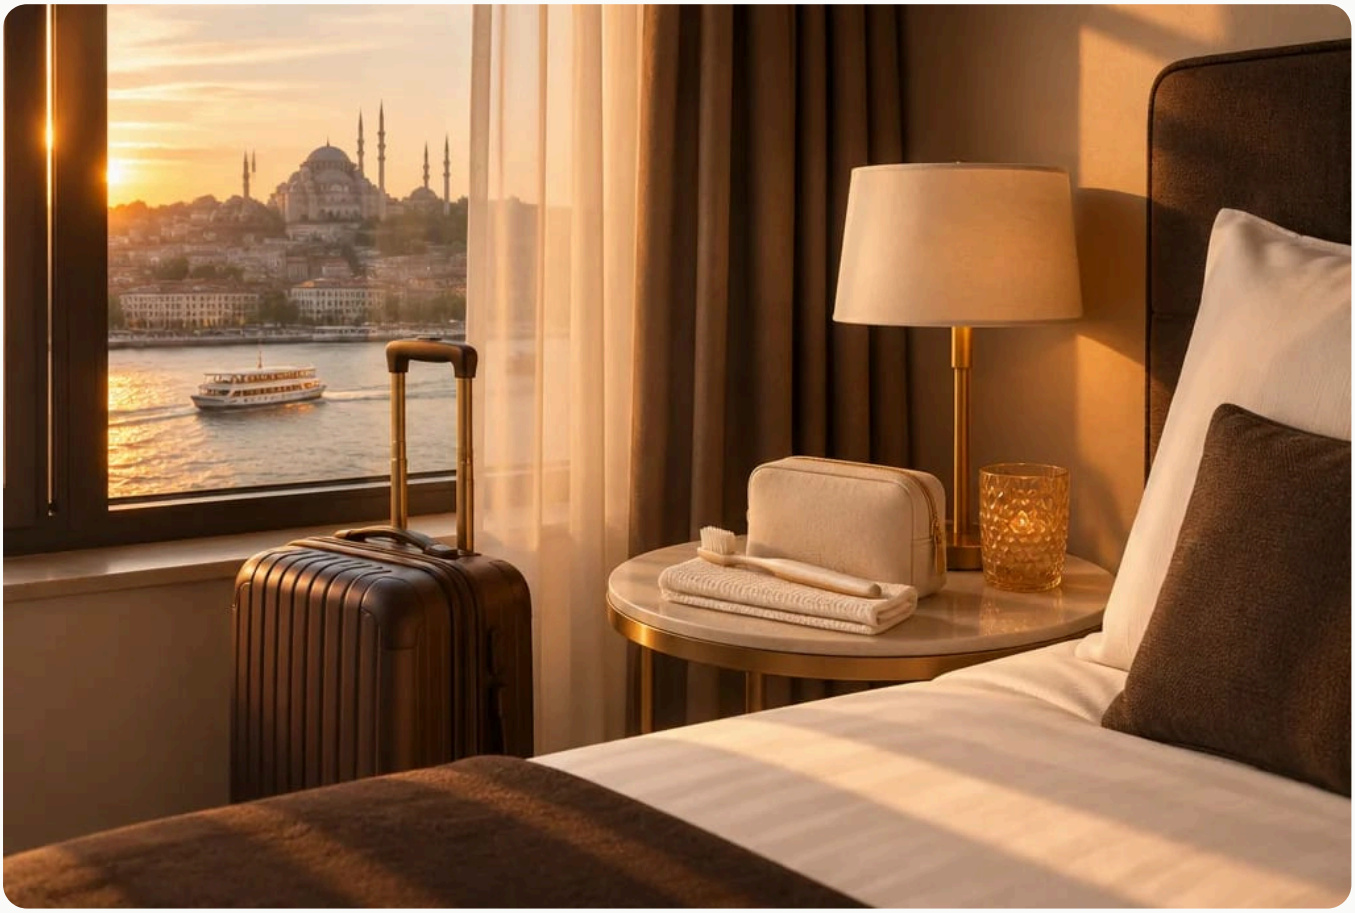

Medication is not included in the single implant price either, and sightseeing tours are available on request at extra cost. Each of these items has its own line on our prices page, so you can see them before you travel.

To find out which of these lines apply to you, send a photo of your teeth or a recent X-ray on WhatsApp or through the form at the end of this page. The consultation is free. Within 6 hours you get a free written quote with your treatment, the number of trips and the length of each stay.

Packages: when the hotel and transfers are included

Hotel and transfers come with our packages: All-on-4, All-on-6, veneers, Hollywood smile and crowns. For smaller treatments such as a single implant, they are optional. Most of the hotels we work with are 4 to 5 star, and the interpreter is free.

The packages cover more than the stay. All-on-4 and All-on-6 include the implants and the metal bar if your case needs one, and medication is included for All-on-4 and for implants for multiple teeth. When you compare "all inclusive" offers, ask each clinic to write down which of these lines are inside the price.

Which implant brands are used?

We work with six implant brands: Straumann, Nobel Biocare, Neodent, Medigma, Medentika and Biotech. The doctor picks the one that suits your case and names it in your plan. When you leave, you get an implant card with the brand and size, so any dentist can identify the implant later.

How many trips, and what that does to the total

A single implant usually takes two trips. The first lasts about 4 days. The second comes about 3 months later and lasts about 5 days, with small differences from patient to patient. The gap follows bone healing and can be longer in the upper jaw or after a graft, and a bone graft or a sinus lift can add a third trip.

Every trip adds flights and nights away, so count them before you compare. The NHS treatment abroad checklist tells you to "do the maths" and factor in fluctuating exchange rates, the cost of possible return trips and any extended stay. It also says you cannot get reimbursement for dental treatment. The UK government's Travel Aware guidance adds that most travel insurance policies are invalidated by planned treatment abroad, so arrange specialist cover well in advance.

You pay per visit, at the time of the treatment, and never for a visit you have not come to yet. Instalments are possible on a credit card if your issuing bank supports them.

Is the dental implants Turkey cost still lower after flights and hotel?

That depends on your case and on what you compare it with. In the UK, nhs.uk says implants are usually only available privately and are expensive; the NHS provides them only in some cases, for example to patients who cannot wear dentures after mouth cancer or an accident. A fair comparison puts a private UK quote next to the full cost of the trip: our price, your flights, any nights a package does not cover, and every trip your plan needs.

Ask for the quote line by line. Turkiye's 2025 regulation on international health tourism requires the facility to issue, with the invoice, a document showing the detailed breakdown and unit prices of the services provided. A clinic that writes those lines down before you travel is giving you the same breakdown earlier, when you can still compare.

What the warranty and aftercare add to the price

If an implant fails, we replace it, and that implant warranty is lifetime. For All-on-4 and All-on-6, the implants have the lifetime warranty and the bridge has 15 years, like a crown. The warranty covers the medical work only. It does not cover damage from external trauma, neglect or missed check-ups, and its terms are written in a warranty certificate in your name.

Follow-up after you fly home is online: you send photos and the team answers. Anything that needs repair under the warranty is repaired free of charge at the clinic in Istanbul. You pay for the travel, and we have no partner dentist in the UK. Before you leave, you receive your warranty and care plan by email, the aftercare guide (PDF), a copy of your X-rays and your implant card.

The two stages of treatment are covered in more detail in Dental Implants in Turkiye, Step by Step and on our tooth implant page.

For your own figures, send your photos or X-ray on WhatsApp or through the form below. You will have a free written quote within 6 hours, with every included line and every possible extra written out. The current ranges are on our prices page.

Frequently asked questions

How much do dental implants cost in Turkey?

It depends on the number of implants and on whether you need a graft or a sinus lift. Current price ranges are on our prices page, and a free written quote for your case takes up to 6 hours.

What is in an all-inclusive dental implants package?

At BM Turkiye, hotel and transfers are included in the packages (All-on-4, All-on-6, veneers, Hollywood smile and crowns) and are optional for a single implant. All-on-4 and All-on-6 include the implants and the metal bar if the case needs one.

Is the CT scan included in the implant price?

Yes. The consultation, X-rays and 3D scan are part of the single implant price.

Is a bone graft extra?

Yes. A bone graft, a sinus lift and a temporary crown are charged separately and added only if your case needs them.

Which implant brands do you use?

Straumann, Nobel Biocare, Neodent, Medigma, Medentika and Biotech. The doctor chooses the brand for your case, and your implant card records the brand and size.

Can I pay in instalments?

Yes, on a credit card, if your bank supports instalments. Otherwise you pay per visit, at the time of the treatment.
